

**CHANNEL ISLANDS HARBOR WATER QUALITY:  
REMOTE SENSOR DATA – 6/29/22 THROUGH 7/6/22**

Below is the weekly remote sensor data from 6/29/22 to 7/6/22. Dissolved oxygen concentrations (DO; in blue) got close to 4 mg/L for a brief period (hours) on the morning of 7/2/22 at Seabridge (station 6), but DO concentrations recovered rapidly. Chlorophyll concentrations (a proxy for microscopic algal biomass, in green) were low at both stations with normal daily oscillations observed.

The City of Oxnard and Aquatic Bioassay & Consulting will continue to monitor the sensors in the area.
